

# A Power Quality analyser and fault recorder

### Model PQI-DA smart

- Wall-mounted housing
- DIN-Rail housing
- Panel mounting housing

### 1. Application

Solving all measurement tasks in electrical grids can be a daunting task. The new Power Quality Interface and Disturbance Recorder *PQI-DA smart*, aimed at low, medium and high voltage grids, represents the A-Eberle response to such needs. This central component can be used either as Power Quality-Interface in accordance with all Power Quality standards or as a device for all physically defined/measured values in typical three-phase systems.

Beside the possibility of standard evaluations, the *PQI-DA smart* also has a high speed fault recorder capability with a 40.96kHz/10.24kHz recording rate and a half cycle r.m.s. registration, which allows for a detailed analysis of grid disturbances.

In particular, *PQI-DA smart* is suitable for monitoring, registering, evaluating and recording special reference quantities or quality agreements between the supplier of energy and the end customer. In addition, the device can provide many measured values in parallel for SCADA applications via standardized interfaces such as Modbus.

Modern voltage quality measuring instruments operate according to the IEC 62586 standard, which describes the complete product characteristic of a Power Quality Analyser. This standard defines not only the purpose of use, the EMC environment, the environmental conditions, but also the exact measurement methods (IEC 61000-4-30) in order to create a comparable basis for the user.

Devices from different manufacturers operating according to this standard, must offer the same measurement results.

According to IEC 62586, the *PQI-DA smart* is a device PQI-**A-FI-H** and has therefore been fully certified in external laboratories.

The *PQI-DA smart* meets all demands of the IEC 61000-4-30 Ed.3 (2015) standard for an A-Class device:

Parameter IEC61000-4-30	Class
Power frequency	А
Magnitude of the Supply Voltage	А
Flicker	А
Supply voltage dips and swells	А
Voltage interruptions	А
Supply voltage unbalance	А
Voltage harmonics	А
Voltage interharmonics	А

Issue 03/2018

### 2. Design

The *PQI-DA smart* has been developed for measurements performed within public grids as well as for recording PQ data within an industrial environment up to 690V (L-L) measurement voltage. Its key characteristics, making it suitable for such environments, are:

- No moving parts (fans, hard drives etc.)
- CAT IV
- Extensive storage capability (can be extended up to 32 GB by the user, permitting several years recording without connection to database)
- Optional "IEC61000-4-7 2kHz to 9kHz" (B1)
- Frequency measurement of voltage and current according IEC 61000-4-7 from 2 kHz to 9 kHz.

### 2.1 Characteristics of the Power-Quality Interface *PQI-DA smart*

#### 2.1.1 Technical Data

- 1.7-inch colour display
- Keypad for basic/direct device configuration
- 1 GB internal memory
- Input channel bandwidth 20 kHz
- 4 voltage inputsFSR: 480V L-N, Accuracy < 0.1%</li>
- 4 current inputs
  - 1A/5A nominal, 500A max current for 1 sec.
  - 1V voltage input for current clamps
- Simultaneous processing of sampled and calculated voltages and currents
- Oscilloscopic voltage and current recorder sampling rate: 40.96kHz / 10.24kHz
- Half cycle recorder:
   power frequency, r.m.s. of voltages and currents,
   voltage and current phasors, power
   recording rate: ~10ms(50Hz) / ~8.33ms (60Hz)
- Powerful recorder triggering
- Online streaming of voltages and currents at 40.96 kHz sampling rate.
- IEC 61000-4-30, Class A voltage quality processing
- Recording of DIN EN 50160 power quality events
- Spectral analysis 2 kHz...9 kHz,(35 frequency bands, BW = 200Hz) of voltages and currents according (IEC 61000-4-7)
- Phase of voltage and current harmonics n=2..50
- 2 general purpose digital inputs (Trigger, Recording Start / Stop, General documentation of level)

- 2 relay outputs for protection monitoring and alarm
- Complex analysis software WinPQ lite (sold as a package)
- As an option: Analysis of the data on an MYSQLbased database using the WinPQ software package.
   Permanent communication and evaluation of the data with many devices in parallel.

#### **Communication Protocols**

- MODBUS RTU
- MODBUS TCP
- IEC60870-5-104 (Option P1)
- IEC61850 (Option P2)

#### Time synchronisation protocols (Receive / Slave)

- IEEE1344 / IRIG-B000..007
- GPS (NMEA +PPS)
- DCF77
- NTP

#### 2.1.2 Mechanical design

The PQI-DA smart is mountable on the wall or via its DIN rail housing.

All connections are accessible via Phoenix type terminals. The connections are made by using plug-in/clamping technology, except for the current and voltage inputs.

For the TCP/IP interface one RJ 45-connector is available.

#### 2.1.4 Dimensions

#### 2.1.5 Colour display

The device's 1.7-inch colour display provides information about the correct connections for the measuring cables and current transducers, as well as it indicates online data on voltage, current, THD, power values and energy.

The number of PQ-events that occurred, the oscilloscope records and R.M.S. records for different periods (last day, week or month) are also displayed.

# 2.2 Measurement / Functions

PQI-DA smart complies with the automatic event detection and measurement standards, which are: EN50160 (2013) / IEC61000-2-2 / IEC61000-2-12 /IEC61000-2-4 (Class 1; 2; 3) / NRS048 / IEEE519 / IEC61000-4-30 class A / IEC6:1000-4-7 / IEC61000-4-15

#### **Continuous Recording:**

Five fixed and two variable measurement time intervals are available for continuous recording: 10/12 T (200ms), 1 sec, n\*sec, 150/180 T (3sec), n\*min, 10 min, 2 h

### 2.7 Online mode for direct readings

#### Measurement / Functions

Oscilloscopic recorder

Voltage and current harmonics n=2..50

Voltage and current interharmonics n=0..49

Voltage and current harmonics 2-9kHz

Frequency spectra up to 20 kHz of voltages and currents

Online streaming of all data classes and all measured values

# 3. Order specifications PQI-DA smart

For determining the smart code ordering details:

- Only one unit can be ordered for codes with the same capital letter.
- When a code's capital letter is followed by the number 9, additional information in plain text is required.
- When a code's capital letter is followed only by zeros, the code may be omitted.

Characteristic	Code
